Lysimachia Goldii
Culture Guide

Botanical name: Lysimachia nummularia
Product form: Vegetative
Containers: Packs, Pints, Quarts, Gallons, Hanging Baskets
Habit: Trailing/Spreading

Garden Specifications
Garden Height: 4–6” (10–15 cm) tall
Garden Width: 10–16” (25–40 cm) wide
Exposure: Full sun to shade
USDA zone: 10–11
AHS zone: 11–3
Product use: Packs, Containers, Hanging Baskets, Landscapes, Patio Pots, Combos

Propagation of Unrooted Cuttings
Root emergence: 8–10 days
Rooting hormone: Not Recommended
Bottom heat temp.: 70–74 °F (21–23 °C) for the first three weeks. After roots are well developed, temperatures can be lowered to hold and tone the cuttings.

Misting: Mist schedules vary depending on light and temperature conditions. Apply just enough moisture to rehydrate the cuttings and keep them from wilting. Cuttings should be hydrated and in a non-wilted stage within 24 hours after sticking. Cuttings that continue to wilt heavily after 24 hours will callus unevenly and will be delayed in rooting. CapSil® (spray adjuvant) can be sprayed on the cuttings at a rate of 2–4 oz/100 gal within 1–2 days after sticking to help in rehydration of the cuttings. Misting should be significantly reduced after 2–3 days and after cuttings become fully hydrated.

Rec. tray size: 105-cell (30 mm) or larger
Propagation timing: 4 weeks for a 105-cell plug; add more rooting time for significantly larger plug sizes.

Temperature
Day: 72–74 °F (22–23 °C)
Night: 72–74 °F (22–23 °C)

Lighting
Day extension lighting: Not necessary
Light intensity: 1,000–1,200 foot candles (200–250 mmoles) for the first two weeks after sticking or until root development occurs. Light levels can be increased up to 3,000 foot candles (600 mmoles) as rooting increases and the cutting matures.

Day length response: Day neutral
Daily light integral: 4–6 mols/day for the first two weeks after sticking or until root development occurs. DLI can be increased to greater than 12 mols/day after root formation.

Media pH: 5.8–6.2
Media EC: SME EC: 0.9–1.3 mS/cm, PourThru EC: 1.4–2.0 mS/cm

Fertilizer: Begin fertilization at 100 ppm nitrogen when roots become visible. Rates can be increased up to 200 ppm nitrogen after roots become well developed. Use primarily Cal-Mag® Plus (calcium nitrate + magnesium nitrate) fertilizers in propagation to prevent unwanted stretch.

Pinching: Recommended

Plant growth regulators (PGRs): Lysimachia Goldii is a trailing plant that is typically pinched once in propagation to control growth. Syngenta Flowers offers Lysimachia Goldii as a pre-pinched cutting to help decrease labor costs and provide the grower with a liner that develops roots faster and creates a denser liner. Transplant on time to avoid stretched growth and over-grown liners.

Finishing
Temperature
Day: 70–72 °F (21–22 °C)
Night: 64–66 °F (18–19 °C)
Average daily temperature: 67–69 °F (20–21 °C)

Lighting
Day extension lighting: Not necessary
Light intensity: 4,000–6,000 foot candles

Transplanting: Transplant directly into the finished container. Place the rooting media slightly below the level of media in the container. Make sure the root ball is covered and that the cutting is situated in the center of the pot.

Fertilizer: Begin fertilization at 100 ppm nitrogen when roots become visible. Rates can be increased up to 200 ppm nitrogen after roots become well developed. Use primarily Cal-Mag® Plus (calcium nitrate + magnesium nitrate) fertilizers in propagation to prevent unwanted stretch.

Pinching: Recommended

Plant growth regulators (PGRs): Lysimachia Goldii is a trailing plant that is typically pinched once in propagation to control growth. Syngenta Flowers offers Lysimachia Goldii as a pre-pinched cutting to help decrease labor costs and provide the grower with a liner that develops roots faster and creates a denser liner. Transplant on time to avoid stretched growth and over-grown liners.
Media EC: SME EC: 1.5–2.1 mS/cm, PourThru EC: 2.3–3.2 mS/cm
Fertilizer: 125–175 ppm N
Pinching: Yes, 1 pinch is recommended 7–10 days after transplant. Plants can be given a second pinch if needed for larger pots and baskets.

**Plant growth regulators (PGRs):** Lysimachia Goldii is a trailing plant that has a medium growth habit. Its growth can be controlled by pinching or shearing.

**Tech tip:** Lysimachia Goldii is a trailing plant that has a medium growth habit and is grown for its attractive gold-colored foliage. Provide moderate to warm temperatures early on after transplant to get the plants established. Avoid over-saturated media and overly cool temperatures. Trimming plants is the best way to control growth.

**Moisture level:** Media should be allowed to dry between irrigations. Alternate between moisture level 2 and 4.

- **2 - MEDIUM:** Soil is light brown in color, no water can be extracted from soil, and soil will crumble apart.
- **4 - WET:** Soil is dark brown but not shiny, no free water is seen at the surface of the soil, when pressed or squeezed water drips easily, and trays are heavy with a visible bend in the middle.

**Common pests:** Aphids, Whiteflies
**Common diseases:** Fungal root rot, Botrytis

**Scheduling**
